DEFRA (Ref: MO43) For Weather Forecast Planning Issued on Monday, 09 October 2023 at 10:40 Local time

Air Quality Forecast for the UK

Issued by the Met Office

Today: Air pollution levels probably remaining Low across much of the UK on Monday. However, some parts of central and northern England, northern Wales and Northern Ireland might develop Moderate to High levels, primarily due to transported Saharan dust being brought down to the surface. Confidence is low regarding this as there is a high level of uncertainty regarding this process and thus increased variability in the forecast.

Tomorrow: Air pollution levels are likely to remain Low across much of the UK on Tuesday, although Moderate levels may continue to effect some areas of northern England.

Outlook: Air pollution levels are most likely to remain Low across the UK, however there is a chance of Moderate to High levels across parts of southern UK on Wednesday, although the uncertainties previously mentioned with this continue.
